

2014 Annual Drinking Water Quality Report

Emigration Improvement District (Public Water System)

We're very pleased to provide you with this year's Annual Water Quality Report. We want to keep you informed about the excellent water and services that have been delivered to you over the past year. Our goal is, and always has been, to provide canyon residences a safe and dependable supply of drinking water.

WATER SOURCES

Emigration Improvement District's (EID) water source is from four wells. Freeze Creek well is an 8" diameter deep well that produces about 60 gallons per minute. Well #2, is an 8" diameter deep well that produces about 250 gallons per minute. Brigham Fork well is an 8" diameter deep well that historically produces up to 300 gallons per minute, but due to mechanical issues currently produces about 60 gallons per minute. EID's recently completed Upper Freeze Creek is a deep well that produces about 240 gallons per minute. The District has two water storage tanks totaling about one million three hundred thousand gallons of capacity.

SOURCE PROTECTION

The EID has a Drinking Water Source Protection Plan available for review. It contains information about source protection zones, potential contamination sources, and management strategies to protect the drinking water. The wells have been determined to have a **low susceptibility level** to potential

contaminants. The potential contamination sources that could affect the production wells include: roads, and residential areas. The District has also developed management strategies to further protect its water resources from possible contamination. If you have any questions or concerns regarding source protection, contact the District manager Mr. Eric Hawkes at 801-243-5741, or Mr. Larry Hall of Aqua Environmental Services Inc. at 801-209- 6382.

QUESTIONS

Currently, the District is operated by a three member board of trustees and a manager. The water system operations is contracted to Aqua Environmental Services Inc. If you have any questions regarding this report or concerns with the water, please contact Mr. Eric Hawkes, District Manager at 801- 243-5741, or Larry Hall of Aqua Environmental Services Inc at 801-209-6382. We want our valued customers to be informed about their water utility. The Emigration Improvement District has a web site at www.emigrationcanyon.org there you will find the most up-to-date information and most recent District activities. The public is encouraged to attend the Trustee Meetings which are generally held on the second Thursday of each month, 7:00 PM at the fire station (5025 E Emigration Canyon Rd).

MONITORING PERIOD

The EID public water system is routinely monitored for constituents in accordance with the Federal and State laws. The following table shows the results of our monitoring for the period prior to December 31, 2014.

DEFINITIONS

In the following table, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Non-Detects (ND) - laboratory analysis indicates that the constituent is not present.

ND/Low - High - For water systems that have multiple sources of water, the Utah Division of Drinking Water has given water systems the option of listing the test results of the constituents in one table, instead of multiple tables. To accomplish this, the lowest and highest values detected in the multiple sources are recorded in the same space in the report table.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter (ug/l) - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per trillion (ppt) or Nanograms per liter (nanograms/l) - one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.

Parts per quadrillion (ppq) or Picograms per liter (picograms/l) - one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in \$10,000,000,000,000.

Picocuries per liter (pCi/L) - picocuries/ per liter is a measure of the radioactivity in water.

Millirems per year (mrem/yr) - measure of radiation absorbed by the body.

Million Fibers per Liter (MFL) - million fibers per liter is a measure of the presence of asbestos fibers that are longer than 10 micrometers.

Nephelometric Turbidity Unit (NTU) - nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Action Level (AL) - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - (mandatory language) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level (MCL) - (mandatory language) The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal

(MCLG) - (mandatory language) The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Waivers (W) - Because some chemicals are not used or stored in areas around drinking water sources, some water systems have been given waivers that exempt them from having to take certain chemical samples, these waivers are also tied to Drinking Water Source Protection Plans.

*If the sulfate level of a public water system is greater than 500 ppm, the supplier must satisfactorily demonstrate that: a) no better water is available, and b) the water shall not be available for human consumption from commercial establishments. In no case shall water having a level above 1000 ppm be used.

**If TDS is greater than 1000 ppm the supplier shall demonstrate to the Utah Drinking Water Board that no better water is available. The Board shall not allow the use of an inferior source of water if a better source is available.

Synthetic Organic Contaminants including Pesticides and Herbicides

2,4-D	N	ND	ppb	70	70	2013 & 2014	Runoff from herbicide used on row crops

TEST SUMMARY

Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.

“I DRINK BOTTLED WATER BECAUSE IT’S SAFER”

All sources of drinking water are subject to potential contamination by constituents that are naturally occurring or are man-made. Those constituents can be microbes, organic or inorganic chemicals, or radioactive materials. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the

Environmental Protection Agency’s Safe Drinking Water Hotline at 1-800-426-4791.

WHAT ABOUT FLUORIDE?

Our water contains very little natural fluoride and there is NO fluoride added to the water.

WHAT ABOUT HOME TREATMENT?

As can be seen from this report, your water is safe from your tap. If you decide to install a treatment device on your service, you must take the responsibility for the maintenance of it. It is possible to make your water unsafe by not taking proper care of your personal treatment devices. The District’s public water is hard and you may want to install a water softener. Water is usually softened by ion exchange systems. Sodium and potassium exchange systems are the most common methods shown to work effectively. Magnetic systems have not proven to be effective.

SPECIAL HEALTH ALERT

Some people may be more vulnerable to contaminants in drinking water. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

WHAT DETERMINES THE MCL LEVEL?

Maximum Contaminant Levels or MCLs are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Thank you for allowing us to continue providing you with clean quality water. We are pleased to keep you informed and educated on all water matters within our service area. We continue to present you with this report every year. Please contact us if you have any questions or concerns.

Dear Mr. Bousfield:

Subject: Consumer Confidence Report for EID Oaks - #18143

Enclosed is a copy of EID Oaks Consumer Confidence Report. It contains the water quality information for our water system for the calendar year 2014 or the most recent sample data.

We have delivered this report to our customers by:

- post a notice of the availability of the report on our water bill and sending a copy to those that request a copy and allowing inspection of the report at the water system office.

If you have any questions, please contact me at 209-6382.

Sincerely,

Larry Hall, Aqua Environmental Services Inc.
